If the Cap Fits—

By Algernon Blackwood

Field-Martin, the naturalist, sat in his corner armchair at the Club and watched them—this group of men that had drifted together round the table just opposite and begun to talk. He did not wish to listen, but was too near to help himself. The newspaper over which he had dozed lay at his feet, and he bent forward to pick it up and make it crackle with a pretence of reading.

"Then what is psychometry?" was the question that first caught his attention. It was Slopkins who asked it, the man with the runaway chin and over-weighted, hooked nose, that seemed to bring forward all the top of his face and made him resemble a large codfish for ever in the act of rising to some invisible bait.

"Something to do with soul measuring, I suppose, unless my Greek has gone utterly to pot," said the jovial man beside him, pouring out his tea from a height, as a waiter pours out flat beer when he wants to force it to froth in the glass.

"Like those Yankee doctors, don't you remember," put in someone else, with the irrelevance of casual conversation, "who weighed a human body just before it died and just after, and made an affidavit that the difference in ounces represented the weight of the soul."

Several laughed. Field-Martin wheeled up his chair with vigorous strokes of his heels and joined the group, accepting the offer of an extra cup out of that soaring teapot. The particular subject under discussion bored him, but he liked to sit and watch men talking, just as he liked to sit and watch birds or animals in the open air, studying their movements, learning their little habits, and the rest. The conversation flowed on in desultory fashion in the way conversations usually do flow on, one or two talkers putting in occasional real thoughts, the majority merely repeating what they have heard others say.

"Yes, but what is psychometry really?" repeated the codfish man, after an interval during which the talk had drifted into an American story that grew apparently out of the reference to American doctors. For that particular invisible bait still hovered above the surface of his slow mental stream, and he was making a second shot at it, after the manner of his ilk.

The question was so obviously intended to be answered seriously that this time no one guffawed or exercised his wit. For a moment, indeed, no one answered at all. Then a man at the back of the group, a man with a deep voice and a rather theatrical and enthusiastic manner, spoke.

"Psychometry, I take it," he said with conviction, "is the quality possessed by everything, even by inanimate objects, of sending out vibrations which—which can put certain sensitive persons en rapport, pictorially as it were, with all the events that have ever happened within the ken of such objects—"

"Persons known as psychometrists, I suppose?" from the codfish man, who seemed to like things labelled carefully.

The other nodded. "Psychometrist, I believe," he continued, "is the name of that very psychical and imaginative type that can 'sense' such infinitely delicate vibrations. In reality, I suppose, they are receptive folk who correspond to the sensitive photographic plate that records vibrations of light in a similar way and results in a visible picture."

A man dropped his teaspoon with a clatter; another splashed noisily in his cup, stirring it a third plunged at the buttered toast of his neighbour; and Field-Martin, the naturalist, gave an impatient kick with his leg against the arm-chair opposite. He loathed this kind of talk. The speaker evidently was one of those who knew by heart the "patter" of psychical research, or what passes for it among credulous and untrained minds—master of that peculiar jargon, quasi-scientific, about vibrations and the rest, that such persons affect. But he was too lazy to interrupt or disagree. Wondering vaguely who the speaker might be, he drank his tea, and listened with laughter and disgust about equally mingled in his mind. Others, besides the codfish, were asking questions. Answers were not behindhand.

"You remember Denton's experiments—Professor Denton, of Cambridge, Mass.," the enthusiastic man was saying, "who found that his wife was a psychometrist, and how she had only to hold a thing in her hand, with eyes blindfolded, to get pictures of scenes that had passed before it. A bit of stone he gave her brought vivid and gorgeous pictures of processions and pageants before her inner eye, I remember, and at the end of the experiment her husband told her what the stone was."

"By Jove! And what was it?" asked codfish.

"A fragment from an old temple at Thebes," was the reply.
“Telepathy,” suggested someone.
“Quite possible,” was the reply. “But, another time, when he gave her something wrapped up in a bit of paper, taken from a tray covered with objects similarly wrapped up so that he could not know what particular one he held at the moment, she took it for a second, then screamed out that she was rushing, tearing, falling through space, and let it drop with a gasp of breathless excitement—”

“And—?” asked one or two.

“It was a piece of meteorite,” was the answer. “You see, she had psychometrised the sensations of the falling star. I know, for instance, another woman who is so sensitive to the atmospheres of things and people, that she can tell you every blessed thing about a stranger whose just-vacated chair she sits down in. I’ve known her leave a bus, fuming inwardly, all his kidney. She seized her hat and hurried away. She walked home to his Chelsea flat, fuming inwardly, wondering vaguely if there was any other club he stepped back farther from the brink where the little waves splashed . . . yet, even as he did so, he realised that the force dictating the impulse was of a protective character, guiding, directing, almost warning. In words, had he been a writer, he might have transposed it thus: “Be careful of that water!” For the truth was it had suddenly made him shrink.

He continued his way, puzzled and disturbed. Of the mutinous forces that lie so thinly screened behind life, dropping from time to time their faint, wireless messages upon the soul, Field-Martin hardly discerned the existence. And this passing menace of the water was disquieting—all the more so because his temperament furnished him with no possible instrument of measurement. A sense of deep water, cold, airless, still, invaded his mind; he thought of its suffocating mass lying over mouth and ears he realised something of the struggle for breath, and the frantic efforts to reach the surface and keep afloat that a drowning man—

“But what nonsense is this? Where do these thoughts suddenly come from?” he exclaimed, hurrying along. He had crossed the road now. So as to put a greater distance, and a stretch of wholesome human traffic, between him and that sheet of water lying like painted glass beneath the fading sky. Yet it pulled and stirred into activity by the least symbol of his lifelong study—a bird, an animal, an insect—had been curiously replaced; and the transition was abrupt enough to touch him with a sense of surprise—almost, perhaps, of shock.

Now, vigorous imagination, the kind that creates out of next to nothing, was not an ingredient of his logical and “scientific” cast of mind, and Field-Martin, slightly puzzled, was at a loss to explain this irregular behaviour of his usually methodical system. He continued his way, puzzled and disturbed. Gardens. . . . That impulse to throw himself over the
parapet was the most outrageous and unaccountable
thing that had ever come upon him . . . and as he hur-
ried down Queensgate he tried to calculate whether
there was time for him to see his doctor that very
night before dinner, or whether he must postpone it to
the first thing in the morning. For, assuredly, this
passing disorder of his brain must have immediate
attention; such results of overwork could not be seen
to quickly enough. If necessary, he would take a holi-
day at once. . . .

He decided to say nothing to his wife . . . and yet
the odd thing was that before dinner was half over the
whole mood had vanished so completely, and his nor-
mal wholesome balance of mind recovered such per-
fect control, that he could afford to laugh at the whole
thing, and did laugh at it—what was more, even made
his wife laugh at it too. The fact remained to puzzle
and perplex, but the reality of it was gone.

But that night, when he went to the Club, the hall-
porter stopped him:

"Beg pardon, sir, but Mr. Finsen thought you might
have taken his hat by mistake last night?"

"His hat?" The name "Finsen" was unknown to
him.

"He wears a green felt hat like yours, sir, and they
were on adjoining pegs."

Field-Martin took off his head-covering and dis-
covered his mistake. Finsen's name was inside in small
gold letters. He explained matters with the porter, and
left the necessary directions for the exchange to be
effected. Upstairs he ran into Slopkins.

"That chap Finsen was asking for you," he
remarked; "it seems you exchanged hats last night by
mistake, and the porter thought possibly—"

"Who is Finsen?"

"You remember, he was talking so wonderfully last
night about psychometry—"

"Oh, is that Finsen?"

"Yes," replied the other. "Interesting man, but a bit
queer, you know. Gets melancholia and that sort of
thing, I believe. It was only a week or two ago, don't
you remember, that he tried to drown himself?"

"Indeed," said Field-Martin dryly, and went upstairs
to look at the evening papers.
